

- VCC – Power supply voltage (typically 2.7V-5.5V)
- GND – Ground
- PB0 to PB5 – General Purpose Digital I/O pins
- ADC0 to ADC3 – Analog inputs for the 10-bit ADC
- AIN0, AIN1 – Analog comparator inputs
- OC0A, OC0B – PWM outputs from Timer0 (Output Compare Match)
- T0 – External clock input for Timer0
- INT0 – External interrupt (on PB2)
- TXD – Serial communication (via SoftwareSerial or bit-banging)
- RXD – Serial communication (via SoftwareSerial or bit-banging)
- SPI (Serial Peripheral Interface)
- MOSI – Master Out Slave In (PB0)
- MISO – Master In Slave Out (PB1)
- SCK – Serial Clock (PB2)
- PCINT0 to PCINT5 – Pin Change Interrupts on all 6 GPIO pins
- AREF – Reference voltage input for the ADC (on PB0)
- RESET – Reset pin (PB5); can be repurposed as I/O via fuse settings
- dW (debugWire) – Serial debugging interface (also on PB5)
- CLKI – External clock input (PB3, enabled via fuse settings)
